

the world's first augmented reality app for co-creating urban green places

combining scientific data with high-quality 3D models of trees, plants and street furniture into an augmented reality app - enabling everyone to co-design the green, inclusive cities of tomorrow

our data partners:

we need holistic **natural infrastructure**
 low-carbon cities
 human health
 biodiversity hotspots

which can only happen with **co-design**
 enables greening at scale with broad public support

brought to the 21st century with **Wild Streets**
 cost-effective tool for nature-centred co-design and scalable engagement

High quality and inclusive engagement makes it easy to design spaces that work well for local communities, which people are connected to and a part of. This is how we take cities through the environmental and ecological transition together, with all perspectives heard. Let's find opportunities in the specifics, of how 15 minute cities work, how Biodiversity Net Gain targets are reached, and how car free streets can offer better quality to everyone who uses them.

citizens

placemakers

- create a design of your own, or in response to consultation underway
- drag-and-drop trees and street furniture into augmented reality
- trees and plants filtered to thrive in your location - right tree, right place
- change the age and season, see what it will be like for future generations
- share your design with others to read, invite them into that potential future

- designs shared to dashboard for council, architects, landscapers, developers
- dashboard shows designs, and the ecosystem services they offer
- easily make street-level visualisations for iterative, continuous engagement
- data and immersive visualisations make engagement more effective
- with open ears, generate public support for change
